

TO ENSURE YEARS OF **SMOOTH & EASY** OPERATION OF YOUR BLINDS, FOLLOW THESE SIMPLE INSTRUCTIONS:

- Slide the operator up or down to position the blind to the desired height. A slight movement of the operator up or down will tilt the blinds.
- Blinds **MUST** be in the closed position before raising and lowering.
- For ease of operation, clean with soap and water or high quality window cleaner to ensure the glass surface is clean.
- If the bottom rail becomes out-of-level, raise the blinds to the fully open position and then fully lower them. Repeat if necessary. The blinds will adjust themselves back to level.

Some units have dual operators, with a separate tilt control. Slide the top operator up or down to tilt the blinds to the desired angle. Tilt the blinds to the open position with the top operator before using the lower operator to raise and lower the blinds.
